- Architect
- Landscape Architect
- Product & Industrial Designer
- Computational Designer

Please see next page for a description of these careers. Contact your advisors/teachers about applying.

RIOS Professional Pathways

RIOS

Architect An architect plans, designs and oversees the construction of buildings, interiors and other aspects of the built environment. They conceptualize and communicate their design ideas through the use of drawings, digital models, physical models and other mediums. They work with clients, engineers, and members of the community to envision and create new spaces.

Landscape Architect Landscape architecture involves the planning, design, and management of the built and natural environments. With their unique skill set, landscape architects work to improve human and environmental health in all communities. They plan and design parks, campuses, streetscapes, trails, plazas, residences, and other projects that strengthen communities.

Product & Industrial Designer This profession oversees the process of creating products and usable experiences, from the beginning stages of design to fabrication. They explore design solutions through form, function, physical ergonomics, marketing, brand development, sustainability, and sales.

Computational Designer As a transdisciplinary office, we work with various softwares and tools to produce visualizations and physical products of our designs. Our computational designers collaborates with all the disciplines across our office to develop tools and workflows that support project design, data visualization, immersive media, sustainability, and project management.
